

The Atlas Product Range in Brief

Atlas MX

Message eXchange is a simplified, jargon free EDI software tool to enter data manually or turn an order into an invoice/credit/acknowledgement/delivery note. Designed for use like an email system with Outbox, Inbox, Archive etc

It is intended for low volume users with no technical expertise or need for integration. Also extremely useful as an instantly available interim measure for larger companies while they perform full integration.

Atlas MX+

Message eXchange Plus is similar to MX but with the addition of a CSV file import export ability allowing for integration with other systems.

Intended for companies who need to be up and running quickly but who also wish to exchange the data automatically with another system using a simple CSV file format.

MX+ has a huge range of configuration capabilities and can be expanded and priced to accommodate any file format whatsoever.

Atlas Matrix Managed Service

This is a fully scalable managed service for data clearing and transformation that runs on the back of BDX but also has access to other communication methods and VANs.

Subscribers send and receive data in a format to suit their in-house systems and use any communication method that they like with the most cost-effective method being BDX. All the EDI translation and communications are carried out by Atlas Products as the data passes through its Matrix system

Matrix copes with all suppliers existing technical infrastructure, accounting system, size and location. Express will accept any document format a sender cares to provide and convert that into the format required by the recipient's accounting or ERP system. It is a complete service offering with no hardware or translation software to install for either buyers or suppliers. Depending on the complexity, buyers and suppliers can be transacting on Express within 48 hours of joining.

Intended for companies with little or no EDI or XML expertise or those who wish to outsource their EDI systems completely

e50 for Sage Line 50 Users

A fully integrated, one button solution for Sage Line 50 users.

EDI knowledge not required. Users only see Sage Line 50

e100 for Sage Line 100 Users

A fully integrated solution for Sage Line 100 users

EDI knowledge not required. Users only see Sage Line 100

eMMS for Sage MMS Users

Atlas EDI Standard

Totally scalable, open super fast data translation and communications system used by small and large companies alike. Users can add/amend their own trading partners, documents, networks and passwords.

Available as single user and company through to multi-user, multi-company, Atlas EDI is an award winning EDI powerhouse package for integration into virtually any other system such as:

| | |
|---------------------------|-------------|
| Sage Line 100, 200 & 500. | Navision |
| Exchequer | CounterAct |
| Kerridge K7 & K8 | XKO Opal |
| Lakeview | Ross |
| SAP | OGL |
| Access | Encore |
| Strategix | Pegasus |
| SUN Accounts | QAD(MFGPRO) |
| Etc. | Etc. |

Atlas EDI is for companies who want to have total control of their EDI system with full accessibility and configuration ability. It also appeals to companies with the need for speed of translation and the need to integrate with varying in-house and back office systems

Atlas EDI Enterprise

As Atlas EDI Standard plus enhanced integration and XML tools.

For the larger organisation that require all the features of Atlas EDI but need enhanced multi-function EDI/XML capability for handling larger volumes and more complex integration.

Atlas BDX

A secure, ultra reliable data exchange service exceeding Van capability at a fraction of the cost. Used worldwide by small and large companies alike such as Intel USA, Unimer UK and Versace.

For companies wishing to significantly reduce VAN charges, trying to manage FTP servers or considering using AS2 or the Internet as a transport mechanism.

AS2 by iSoft

Atlas Products International are one of only two European suppliers of iSoft's AS2 data exchange software as chosen by Wallmart USA and ASDA UK

Where AS2 is essential for companies to trade with Asda, Compass and others. AS2 is designed to transport data securely point to point over the internet.
